Practical Title: Event Management CRUD with Poster Upload and File Validation

Problem Definition: Develop event management functionality for admin users. Admin can add, view, update, delete, and upload event posters. Validate uploaded files on the server for allowed MIME types and maximum file size (≤ 2MB).

A. Theory & Analysis

1. Are add, update, and delete functionalities implemented correctly?

Yes. Administrators can create new events with title, date, venue, category, and poster; update existing event records; and delete obsolete events. Deleting an event also unlinks its poster image from the server filesystem.

2. Is the UI linked with the database correctly?

Yes. All event actions synchronize directly with the 'events' table in MySQL. The admin table displays event badges (upcoming, completed, cancelled) and previews uploaded poster images.

3. Are poster uploads validated for type and size?

Yes. Server validation checks: (1) upload error status; (2) file size limit of 2MB (2,097,152 bytes); (3) MIME type inspection using PHP finfo_file(FILEINFO_MIME_TYPE) allowing only image/jpeg, image/png, and image/webp; and (4) assigning a sanitized random filename to avoid collisions.

4. Are success and failure messages displayed?

Yes. Contextual Bootstrap alerts communicate outcomes, such as 'Event created successfully' or 'Invalid file type. Only JPEG, PNG, and WebP images are permitted.'

B. Implementation Details

I developed the event management module in pages/manage_events.php supporting full event CRUD and secure poster uploads to uploads/posters/. Uploads are validated for file size (≤ 2MB) and MIME type using PHP's Fileinfo extension, with randomized filenames stored in MySQL. I tested valid image uploads as well as invalid file rejection.

C. Evidence of Work

E. Learning Outcomes

I learned how to implement secure file uploads in PHP with MIME validation, file size enforcement, unique sanitizing renames, and complete CRUD management in MySQL.
